

Billet Rear Defroster Kit Installation (94-04)

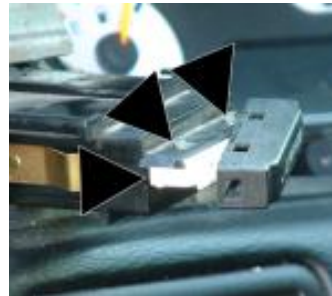

1. Pull the existing factory headlight knob out to the "ON" position. Insert a small flat headed screwdriver into the slot on the side of the headlight knob. Gently pry on the retainer clip while pulling on the knob. The knob will simply slip off the mounting post once the clip is disengaged.

2. Using a #20 Torx screwdriver, remove the two retaining screws. Remove the outer gauge bezel by gently pulling on the outside edges. It will "pop" off.

3. Remove the Rear Defroster button assembly from the dash by depressing the two gold colored tabs inward. Once the assembly has been pulled out of the dash, gently pry the existing Rear Defroster button off by depressing the retaining tabs. (Pictured)

4. Position the new Billet Rear Defroster button over the mounting base of the switch assembly. Gently press the new button into place.

5. Re-assemble the dash etc. in reverse order.
