UPR Billet Oil Drain Plug with Drain Valve Installation

Remove the factory drain plug by rotating counter clockwise.

Install the UPR Billet Drain Valve by rotating clockwise until the retaining tabs are FULLY SEATED in the oil pan retainer grooves.

Be sure to shop our online store for the best deals: www.uprproducts.com
When the Drain valve is installed properly, the retainer tabs will be fully seated into the oil pan retainer groove.
To drain the oil, turn the drain valve clockwise.

The valve is made so that a 1/2" id hose can be pushed onto the barb which makes draining the oil simple, safe, and clean!

To close the drain valve and stop oil flow, rotate the drain knob counter clockwise.

Once oil draining is complete, close the drain valve and reinstall the dust cover. Be sure to check that the retainer tabs are fully seated in the oil pan retainer grooves.

**Caution:** It is best to perform an engine oil service when the engine has been allowed to cool. The UPR Billet Drain Plug is in direct contact with engine oil and WILL BE HOT to the touch if the engine is still at operating temperature. Use Gloves and Protective Gear when servicing the vehicle. It is important to clean and inspect the Billet Oil Drain Plug magnet and O ring. Replace O ring as needed. If the retaining tabs on the UPR Billet Drain Plug become loose or damaged, do not reinstall until they are repaired properly or the drain plug is replaced. Applying light pressure to bend them back into shape is acceptable as long as the retaining tabs properly engage the retaining groove in the oil pan.
