

UPR Oil Catch Can Installation

Ecoboost Mustang One Way Breather Tank

Remove the factory oil fill cap and install the UPR oil fill adapter. Mark where you want the fitting to face, remove the oil fill adapter from the valve cover, screw the fitting into the oil fill adapter and reinstall.

* The valve cover and oil fill neck is made of plastic. Do not tighten the fitting into the oil fill adapter while the adapter is installed into the valve cover. You will damage the valve cover and / or the oil fill retaining tabs in the valve cover.

Using the supplied hardware, install the catch can bracket onto the driver side shock tower tab.

Install the catch can onto the bracket with the supplied knob (knob style may vary from photo).

The hose included has one end left off so you can cut it to the length you need. Install the hose end cover, then lubricate the barbed fitting with a little engine oil and push it into the hose.

Never pry or remove the grey buttons on the catch can fittings. Removing the buttons will damage the fitting and the fitting will need to be replaced.

Always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and internal components. Any damage due to freezing is NOT WARRANTY. You must dispose of the liquid collected in the catch can properly (with used waste oil) properly according to your local laws.
