

UPR Single Valve Oil Catch Can Installation 2024 Ranger Raptor

1. Install the bracket extension onto the rear battery tray stud. Install the UPR catch can using the supplied knob. You can adjust the position of the catch can with the brackets.

2. Locate the U shaped PCV hose that connects from the passenger side valve cover to the intake manifold. Remove it by releasing the quick release fittings.

3. The top fitting on the catch can is the inlet from the PCV. Connect this hose to the PCV fitting on the passenger side valve cover. The side fitting will connect to the intake manifold. The arrow printed on the check valve in the hose connecting to the intake manifold must face away from the catch can.

The UPR catch can is easily serviced by removing the quick release knob, releasing the quick release fittings by pressing the grey buttons (never pry the buttons out) and disconnecting the hoses. Unscrew the catch can cup and dispose of the contents with used waste oil and dispose waste oil according to your local laws. The catch can and components are easily washed with warm water and dish soap. If need be, the catch can and components can be removed and the vehicle can be returned to stock for dealer service.

Check your catch can every 500 -1000 miles at first until you are familiar with how much your engine will be expelling. Most will have a few ounces in the can every 5000 miles. Due to condensation, always check and drain the catch can more often in winter / freezing weather. If the water/oil mixture in the catch can is allowed to freeze it will cause damage to the catch can and internal components. Any damage due to freezing is NOT WARRANTY. You must dispose of the liquid collected in the catch can properly (with used waste oil) properly according to your local laws.
